

WORKSHEET (II)I) VSAQs

1) Suggest any two ways to check land degradation.

Ans) Any two of the ways to check land degradation:-

(i) Contour ploughing : Ploughing along the contour lines to decelerate the flow of water down the slopes.(ii) Terrace farming : Restricting water erosion by cutting out steps on the slopes to make terraces.

2) What are normal species?

Ans) A group of organisms whose population levels are considered healthy and sustainable for their survival are called normal species. They

are not endangered or at a risk of extinction.
For eg: Cows, goats, grass, mango trees etc.

3) What was considered as a viable alternative to the multipurpose projects?

Ans) Water harvesting ^{system} was considered as a viable alternative, both socio-economically and environmentally to the multipurpose projects because of their significant disadvantages. Some examples of such systems are:-

- 'Guls' and 'kuls' (diversion channels)
- Rooftop rainwater harvesting
- Inundation channels for irrigation.
- 'Khadins' and 'Johads' (rain fed storage structures)
- 'Tankas' (underground tanks)

4) What is Net Attendance ratio?

Ans) The Net Attendance Ratio (NAR) is a metric in education that measures the percentage of children ^{of} ~~between~~ a specific age group (i.e. 14 and 15 years in India) attending school out of the total number of children in the same age group.

II) SAQs

1) What is the role of humans in resource development?

Ans) Humans play a significant role in resource development in the following ways:-

- (i) Transforming resources: Humans convert raw materials (like iron ore) into valuable resources (like steel) with diverse applications.
 - (ii) Utilizing resources: They are the ones who possess necessary skills, knowledge and technology to transform and utilize resources to enhance their quality of life and fulfill their needs.
 - (iii) Interacting with nature: Humans leverage technology to interact with the natural world and create institutions that facilitate resource development.
- 2) What is sustainable development?

Ans) Sustainable development is a careful developmental approach that aims at overall growth of a country without :-

- (i) damaging the environment.
- (ii) compromising the ability of the future generations to meet their own needs.

3) Is it possible that an area or ~~any~~ region may have ample water resources but it is still facing water scarcity?

Ans) Yes, it is quite possible to face water scarcity in a region with ample water resources. It can happen because :-

(i) High demand : Due to huge population or high irrigational demands, water required is more than water available. Eg: Punjab

(ii) Improper water management : Leaky canals, outdated irrigation systems, no proper recycling and ^{no} rain-water harvesting can make water distribution uneven and faulty. Eg: Slums in Mumbai

(iii) Pollution : If the water sources are contaminated, they are not usable even if there is ample of them. Eg: Kanpur, as the Ganga river is present but polluted.

[For eg. Punjab faces water scarcity even

4) ⁶⁶ "Forests play a key role in the ecological system" - Highlight the value of forests in our life.

Ans) Forests play a key role to our lives and the planet's ecological imbalance in the following ways:

(i) Ecological balance: Forests maintain the balance of oxygen and carbon dioxide ^{and} preserve biodiversity by giving food and shelter to animals.

(ii) Climate regulation: Forests regulate temperature, influence rainfall patterns and help in preventing floods and droughts.

(iii) Forest resources: Humans depend on forests for wood, fruits, nuts, honey, bamboo, medicinal plants, resins etc.

IV) LAQs

i) What has been the contribution of the Indian Wildlife Protection Act in protecting habitats in India?

Ans) The contribution by the Indian Wildlife Protection Act, 1972 towards protecting the habitats were :-

(i) Activities harming wildlife were banned : Poaching ~~and~~ and wildlife trade were strictly restricted. This in turn, helped to preserve natural habitats.

Q10

(ii) National parks and wildlife sanctuaries were established : The creation of protected areas protected wildlife and their habitats from human interference.

Q11

(iii) Endangered species were marked for protection : The tiger, the one-horned rhinoceros, the Kashmir Stag etc were given special protection, ~~the~~ good ^{were} environment for breeding and their habitats ^{were} protected.

Q12

(iv) The protected areas repelled activities : Deforestation, mining and urbanisation were reduced near ~~the~~ such areas to keep the habitats untouched.

Q13

(v) Awareness and punishment : The Act spread awareness and also put in place strict penalties for violations.

2)

⁶⁶ What may be development for one may

"not be development for another" - Explain with ^{an} example.

Ans) The given statement means development is subjective. For different people, developmental goals are different. An what a person sees as development might not be development in front of another, instead it may harm another person as well.

Let's take industrial development as an example. When factories are set up, it creates jobs, helps urbanisation and grows ^{the} economy. But it comes at the cost of our environment, polluting the ~~air~~ water and soil, and leading to the destruction of natural habitats.

In this case, the government, some businesses and employees see industrialisation as development but the local communities who live there suffer degradation in their quality of life. The health of future generations are compromised. ~~and~~ ~~even~~ Thus environmentalist groups see this as a threat to nature and livelihood.
