8.	Read the passage given below and answer the following questions: Some of the Muslim political organisations in India were also lukewarm in their response to the Civil Disobedience Movement. After the decline of the Non-Cooperation-Khilafat Movement, a large section of Muslims felt alienated from the Congress. From the mid-1920s the Congress came to be more visibly associated with openly Hindu religious nationalist groups like the Hindu Mahasabha. As relations between Hindus and Muslims worsened, each community organised religious processions with militant fervour, provoking Hindu-Muslim communal clashes and riots in various cities. Every riot deepened the distance between the two	4

communities. The Congress and the Muslim League made efforts to renegotiate an alliance, and in 1927 it appeared that such a unity could be forged. The important differences were over the question of representation in the future assemblies that were to be elected. Muhammad Ali Jinnah, one of the leaders of the Muslim League, was willing to give up the demand for separate electorates, if Muslims were assured reserved seats in the Central Assembly and representation in proportion to population in the Muslim-dominated provinces (Bengal and Punjab). Negotiations over the question of representation continued but all hope of resolving the issue at the All Parties Conference in 1928 disappeared when M.R. Jayakar of the Hindu Mahasabha strongly opposed efforts at compromise.

• Classification of soils

Black soil	?	?
Fine-textured and clayey, making it sticky when wet and capable of developing wide cracks when dry. It is highly suitable for growing crops like cotton and sugarcane, earning it the name "black cotton soil".	This soil is fertile, composed of sand, silt, and clay, and rich in minerals like potash, lime, and phosphoric acid, making it ideal for crops such as wheat, rice, and sugarcane.	This soil is a reddish-brown, coarse, and porous soil rich in iron and aluminum oxides but poor in nutrients like nitrogen, phosphorus, and potassium. It is acidic, prone to erosion, and often lacks organic matter due to high temperatures and heavy rainfall. It can harden into brick-like blocks when dried.

Many thought that given the disadvantages and rising resistance against the multi purpose projects, the water harvesting system was a viable alternative, both socio-economically and environmentally. In ancient India, along with the sophisticated hydraulic structures, there existed an extraordinary tradition of water harvesting system. People had in-depth knowledge of rainfall regimes and soil types and developed wide ranging techniques to harvest rainwater, groundwater, river water and flood water in keeping with the local ecological conditions and their water needs. In hill and mountainous regions, people built diversion channels like the 'guls' or 'kuls' of the Western Himalayas for agriculture. Rooftop rainwater harvesting was commonly practised to store drinking water, particularly in Rajasthan. In the flood plains of Bengal, people developed inundation channels to irrigate their fields. In arid and semi-arid regions, agricultural fields were converted into rain fed storage structures that allowed the water to stand and moisten the soil like the 'khadins' in Jaisalmer and 'Johads' in other parts of Rajasthan.
